EDUCATION

2020-2024

Kayseri Özel OSB TEKNİK KOLEJİ

ANATOLIA TECHNIC PROGRAM
INFORMATION TECHNOLOGIES DEPARTMENT

2024-Present

Fırat University

B.S. in Software Engineering (Computer
Science)

REFERENCES

- İrfan Ateş - School Coordinator Assistant Principal
- Anıl Güngör - Head of Department of Information Technologies

LANGUAGES

- Turkish (Native)
- English (B2)

SKILLS AND TECHNOLOGIES

- Programming: Python, C#, Node.js, JavaScript
- AI / ML: PyTorch, TensorFlow, Scikit-Learn, OpenCV, Pandas
- Computer Vision: Object tracking, UAV vision pipelines, real-time inference
- Embedded Systems: Arduino, STM32, Jetson Xavier NX
- Software Development: Desktop apps, API development, backend services
- Tools & Workflow: Git, Scrum, Agile development
- Other: Microsoft Office, Team leadership, Cross-functional collaboration

PERSONAL

I am a multidisciplinary software engineer with hands-on experience in machine learning, computer vision, embedded systems, and cross-platform application development. My background spans deep learning pipelines, UAV avionics, intelligent vision systems, and AI-powered software platforms.

I have led and contributed to competitive R&D teams such as autonomous UAV systems, sounding rocket avionics, and agentic AI-integrated applications. I enjoy designing scalable solutions that bring together research-driven models and real-world engineering. Currently, I focus on LLM training, agentic AI workflows, and high-performance Python development.

EXPERIENCES

Junior Software Developer (Intern)

ABC Teknoloji A.Ş.

July 3 2023 - September 1 2023

No Available link Due to NDA

- Developed a NodeJS ERP scheduler module for steel manufacturing machines and integrated with companies existing .NET infrastructure
- Used FirebirdSQL and MSSQL for database management
- Used Devextreme tools and designed custom UI components enhance user experience

Leader, Avionics & Embedded Systems

Capella Sounding Rocket Team

December 27 2021- June 14 2024

No Available link Due to NDA

- Designed and developed flight control algorithms to build a ground station system and rocket avionics
- Developed a Ground Control Station (GCS) interface using C# Windows Forms
- Programmed a STM32F103C8(LQFP48) with register library

Computer Vision & UAV Systems Engineer

Alçın Figthing UAV Team

October 5 2023- June 14 2024

[UAV Tracking GitHub Link](#)

- Designed and developed flight control algorithms to build a ground station system and UAV avionics
- Used Qt Quick for designing and deploying a Ground Control Station (GCS)
- Optimized and deployed a custom YoLov8 model to detect and track UAVs onto a NVIDIA Jetson XavierNX

Scrum Master & AI Engineer (LLM Training + Agent Integration)

Budget Travel College Project Team

2025--Present OpenSource

[BudgetTravel GitHub Link](#)

- Worked as scrum master in a first year capstone project
- OpenAI and Google Map API integration to optimize travel routes and plans
- Designed and developed a full-stack AI powered web platform

Project Founder — AI/ML Research (CV Model Training and Scientific research)

OncoMind open-source project

2025--Present OpenSource

[OncoMind GitHub Link](#)

- Conducted computational research on kinase protein inhibitors to structure the dataset for an AI-driven drug discovery pipeline.
- A Generative AI model has been developed and trained to synthesize novel, chemically viable drug candidates (SMILES) for targeted therapy.
- Architected a scalable full-stack healthcare platform integrating a Python (FastAPI) AI backend with a C# (.NET) service layer and React frontend, backed by MongoDB for flexible data storage.
